

LE THANH PHUONG

IT / TECHNOLOGY PROFESSIONAL

Full-Stack Development | Systems | Database | Deployment

IT graduate with hands-on experience building and running business systems and production websites: a sales portal (Java Spring Boot, React, SQL Server), an internal admin system (ASP.NET MVC, C#), and 13 company websites. Work has covered frontend, backend, databases, API integration, server deployment, and fixing live production issues. Comfortable learning new tools and adapting to new business domains; open to IT, systems, implementation, and technical support roles as well as development.

CORE SKILLS

Frontend

React, Next.js, TypeScript,
JavaScript, HTML, CSS, Tailwind
CSS, AJAX, Vite, Phaser 3

Backend & Database

Java, Spring Boot, Spring Security,
ASP.NET MVC, C#, PHP, Node.js, SQL
Server, MySQL, MongoDB, REST API

Business Systems

User login & role-based access
(RBAC), approval workflows,
dashboards & reporting, WordPress,
WooCommerce

Servers & Deployment

IIS, VPS, Hostinger, Cloudflare,
DNS, SSL, database backup &
restore, Git, GitHub

Additional Strengths

Troubleshooting live systems,
learning new tools independently,
documenting for non-technical
readers, coordinating tasks and
interns

EDUCATION

Greenwich University

Information Technology | 09/2019 -
03/2024 | GPA 3.38 / 4.0

CERTIFICATES

Duolingo English Test 95 / IELTS
5.5 equivalent

Became a Fresher - DevPlus Campus
| December 24th, 2022

PROFESSIONAL EXPERIENCE

Salesoft Online (ECO3D Portal)

04/2026 - Present

Full-Stack Web Developer | Java Spring Boot, React (Vite), SQL Server

Website: banggia.eco3d.vn

- Built and maintained Salesoft Online, ECO3D's business portal for internal staff and external resellers (CTV), with Java Spring Boot, React, and SQL Server.
- Implemented role-based access and a two-stage approval workflow for reseller accounts, so Marketing staff screen applicants and Approvers make the final decision.
- Diagnosed and fixed a Spring Security authentication issue (@AuthenticationPrincipal) where logged-in non-employee accounts were silently not recognised across multiple parts of the system.
- Prevented employee and reseller accounts from being mixed up in a database table shared with an older desktop sales (POS) system, by designing a safe ID-namespacing scheme.
- Added Google reCAPTCHA v2 to block spam on a public stock-check page, and switched stock figures to an existing stored procedure, replacing an inaccurate workaround.
- Built a sales dashboard and reseller login analytics showing orders and revenue per reseller, using existing order data without adding new database tables.
- Wrote technical documentation, process diagrams, and feature summaries so management and other teams could review new features.

ECO3D Web Development (WordPress / PHP)

06/2024 - Present

Full-Stack Web Developer / Technical Lead

Websites: kinggoggles.com, vuason.com, scba.vn, sudecons.vn, thamcachdien.vn, popa.vn, hachico.com.vn, gmggloves.com, honeywell-safety.vn, giayantoan.net, gangtaydien.com, kingprosafety.com, promask.vn

- Developed custom features and maintained 13 live websites for ECO3D's safety-equipment and industrial-product brands, using WordPress, PHP, JavaScript, and MySQL.
- Wrote custom plugins and shortcodes to add features the standard platform lacked: product catalogs, instant search and filtering (AJAX), product detail pages, and dynamic page components.
- Connected the websites to product and business data through REST APIs and database queries, and added user login and access control to custom features.
- Extended WooCommerce (online store), Flatsome, and Elementor with custom PHP and JavaScript where built-in features were not enough.
- Kept all sites running: managed hosting, domains (DNS), Cloudflare, SSL certificates, and security, fixed production issues and improved website performance.
- Worked between marketing and IT: turned marketing requests into technical tasks and assigned website and content tasks to interns.

ECO3D Internal Admin System (ASP.NET MVC)

06/2024 - 03/2025

Full-Stack Web Developer | ASP.NET MVC, C#, SQL Server, IIS

Website: eco3d.vn

- Developed an internal admin system and business websites with ASP.NET MVC, C#, and SQL Server, including user login, access control, product data management, and an admin interface.
- Deployed the applications to VPS servers and configured the IIS web server (application pools, bindings, SSL) so they could run in production.
- Managed SQL Server databases: user accounts, backups, restores, and connection problems.
- Set up Cloudflare and DNS, monitored server health (CPU, RAM, disk, uptime), and fixed production issues to keep the websites available.

Freelance & Client WordPress Websites

2024 - Present

WordPress Developer / Website Support

Websites: hikarium.com, clearsimulations.com

- Built a WordPress brand website with responsive layouts, and provided hosting, DNS, and troubleshooting support to keep client sites running.

AutoRok 2023

12/2023 - 05/2024

Frontend Developer | React, i18next, JavaScript

GitHub: <https://github.com/GnauhPTV/autorokwebsite>

- Developed responsive website interfaces with React, JavaScript, HTML, and CSS, including multilingual support with i18next.

PERSONAL & TRAINING PROJECTS

Playable Ads Studio UI

2026

Self-built product | Next.js, React, TypeScript, Zustand, Phaser 3

GitHub: <https://github.com/GnauhPTV/Playable-Ads-Studio-UI>

- Built a no-code editor for creating interactive mobile ad prototypes without programming, using Next.js, React, TypeScript, Zustand, Tailwind CSS, and Phaser 3.
- Developed the editor interface (templates, visual scene editor, layers, asset manager, phone preview), a live preview of ad behaviour, project validation, and ZIP export to a standalone HTML5 package.

UA Playable Games Lab

2026

Self-learning project | Vite, TypeScript, Phaser 3

GitHub: <https://github.com/GnauhPTV/UA-Playable-games-lab>

- Built four HTML5 mini-game ad prototypes covering tap and drag controls, merging, collision detection, targeting, rewards, timers, end screens, and replay flow.
- Packaged a game as a standalone ZIP with JSZip, and used a structured Git workflow with feature branches, version tags, a CHANGELOG, and a test plan.

Valorant Stats Discord Bot

2022 - 2023

Personal project | Node.js, Discord.js, MongoDB, Mongoose, Axios

GitHub: <https://github.com/GnauhPTV/valorant-stats>

- Built a Discord bot that pulls Valorant player statistics from a REST API, with commands for match, agent, weapon, and map stats, and account linking stored in MongoDB.

Enterprise Management Project

03/2023 - 05/2023

Team project | Full-Stack Developer, 6-person team

GitHub: <https://github.com/GnauhPTV/Comp1640>

- Designed the UI and connected frontend with backend for employee management, announcements, and internal social-feed features.

Unity 2D Game Project

07/2022 - 10/2022

Training project | Unity 2D, C#

- Implemented game logic and character animations in Unity 2D with C# and JavaScript across multiple team projects.
